

### **Management Health Solutions, Inc. Enhances Clinical Pharmacy Valuation and Announces a Strategic Partnership with Capital Inventory**

**FAIRFIELD, CONNECTICUT, JUNE 9, 2009** | Management Health Solutions, Inc. (MHS) the leading provider of physical inventory solutions to the healthcare industry, announced today that it has enhanced their Clinical Pharmacy Valuation service (CPV) and has formed a partnership with Capital Inventory to help deliver this expanded solution.

MHS's Clinical Inventory Valuation (CIV) service has been utilized by healthcare organizations across the country. CIV provides accurate and cost effective clinical inventory in operating rooms and cath labs. Clinical Pharmacy Valuation (CPV) provides the same cost-effective service and reporting capabilities as the CIV service for pharmaceutical inventory needs. This product enhancement is delivered through a strategic partnership with Capital Inventory.

“Enhancing our current physical inventory service with CPV is imperative to delivering one complete inventory solution,” said Bill Zierolf, President and CEO of MHS. “Using a standardized process and accurate reporting to assess on-hand inventory is vital to hospitals’ financial health and day-to-day operations and CPV now allows hospitals to use that same standardized process across all of their inventories.”

CPV offers a total inventory valuation of stocked pharmaceuticals, both on the shelf as well as with automated medication and supply management systems such as Pyxis® and AcuDose-Rx®. NDC Level data and experienced staff who count to the lowest unit of measure ensure validation of data entry at the time of capture. MHS offers flexible valuation models to meet the needs of each client for each inventory.

Clients employing MHS's CIV or CPV service are able to customize and search their valuation reports through a feature rich secure portal. Through this interactive reporting capability, a hospital or health system can view all inventory, at all facility locations with one secure login. Custom report creation is available through the MHS Inventory portal which allows hospitals to utilize and manipulate the data that was generated from the

physical inventory. This actionable value-added information provides clients with the data to trim excess spending without compromising care or staff satisfaction.

**ABOUT MANAGEMENT HEALTH SOLUTIONS, INC.**
